Telekia Speciosa

**Germination:** Seeds are large, Plant has a large root system and is very vigorous, best to start in a 128 or larger size tray to avoid the plants getting root-bound, Germination time is 10-14 days, ideal germination temperature is 70 degrees F, (68-70) Keep in cooler conditions once germination occurs. Sow 2 seeds per cell.

**Growing On:** Rapidly growing, do not allow plants to become root-bound. Do not use a high nitrogen fertilizer. Full sun-part shade. Do not over water. Very vigorous.

**In the Landscape/Pot-** Once it has bloomed initially, cut it back to the ground, fertilize and will re-grow with fresh leaves and blooms from mid-summer through fall.
